

Hi my name is Tammy Bradley and my partner and parents bought a farm in the Narrabri district 2 years ago.

We have recently been trying to get broadband internet connected and have been told it is not available in our area.

This was not a real surprise to us as we are on the Bohemia exchange and cant even get caller id the dial up is very slow and frustrating and being new to the farming industry the internet makes a huge difference to us.

In talking to our friends and neighbours we were told about a program called the two way satellite program they say that this is the greatest thing out for people like us living in remote areas, we were wondering if this program is still available or are there any other options for us and how we can apply for them,any help would be greatly appreciated.
